

AQUASTAB

Chlorine stabiliser

EQUILIBRIUM

1. PROPERTIES

Chlorine stabiliser based on Isocyanuric acid, it regulates and reduces the consumption of Chlorine.

AQUASTAB is used in conjunction with products that do not contain stabiliser (liquid Chlorine, gaseous Chlorine, Calcium Hypochlorite). Use **AQUASTAB** when filling the pool if it is filled during summer or when the pool is emptied at the end of the season.

2. INSTRUCTIONS FOR USE

Add 2.5 to 3 kg for every 100 m³ of water on filling the pool to the pump pre-filter or to the skimmer while the pool is not occupied.

Every time fresh water is introduced, add **AQUASTAB** in proportion to the volume of fresh water.

Measure the concentration of **AQUASTAB** during the season to maintain it between 15 and 35 mg/L, it should never rise above 75 mg/L.

Above this concentration, it reduces the efficacy of the Chlorine and increases the cloudiness of the water.

3. TECHNICAL DATA

Appearance	White granules
pH at 1 %	3.5 +/- 1
Density	0.90 +/- 0.01
Storage	Store protected from light and heat
Composition	Isocyanuric acid
Contains among other components (EC regulation No. 648/2004)	Does not contain any controlled substances

4. PRECAUTIONS FOR USE

No special precautions required***.

5. PACKAGING

8845105	Aquastab - 5 kg
8790710	BWT Commercial Stabiliser - 25 kg
